

Barrel Clamps

Barrel Clamps - Called "Barrel Clamp", this hydraulic attachment is actually used on forklifts so as to squeeze items which you would like to move with the lift truck. Normally, they're used in order to handle kegs, paper rolls and barrels, along with a few barrel clamp designs having the ability to revolve the load. For instance, the rotate function allows a lift truck operator to put in a vertically stored paper inside the horizontal intake of a printing press.
